## Meta Quest: Installing the Tools you need for XR!

Let's get started with installing our XR development tools!

We'll be using the latest Unity 2022 version + Visual Studio 2022.

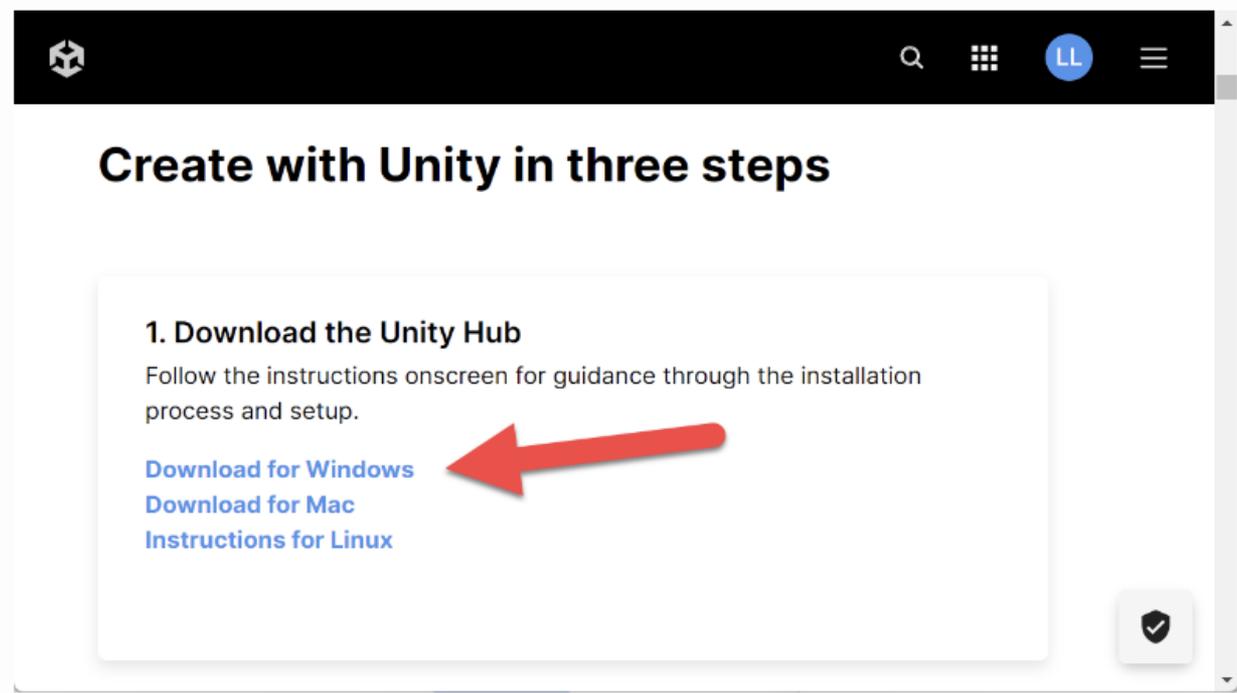

## Meta Quest: Setting up your Meta Quest XR Project!

Here is where we begin our XR experience journey! We'll be setting up a completely new XR experience, from beginning

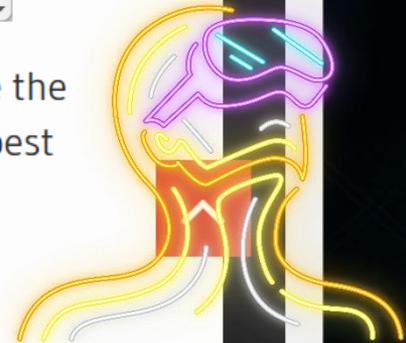

- Download and install **Unity Hub**  
(<https://unity3d.com/get-unity/download>)

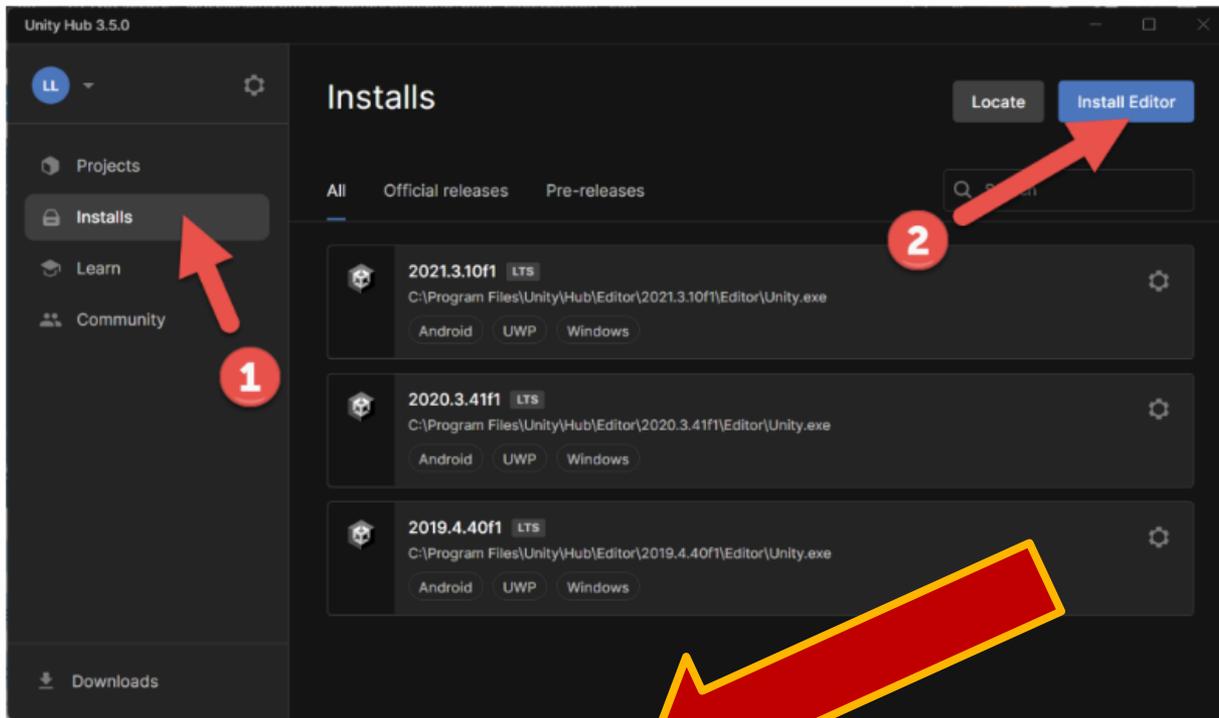

- **Unity** is constantly releasing new versions of their tools (very exciting to see the investments they're making in our favorite XR tools) – so **Unity Hub** is the best way to keep up to date with the newest versions and manage your projects!

1. Click on **Installs**
2. Click on **Install Editor**

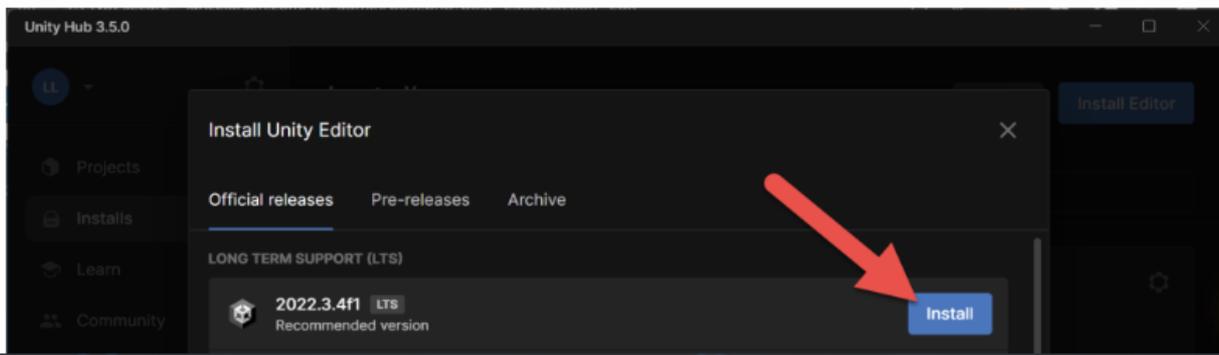

- Here we can see the Unity versions I currently have installed. I keep

# Add OpenXR

- So as more and more XR devices entered the market of the past several years, more and more different libraries were being used for each of them. So while Unity could be used to develop for each, we couldn't have one XR project that could be easily run across multiple devices – uggg...
- OpenXR to the rescue. OpenXR is a standard that allows developers to (generally) write one Unity application and run it across multiple devices.
- Not until THIS year (really only in the past several months) has OpenXR matured to the point where I'd recommend it over device specific libraries – now that it has – awesome XR experiences are even easier to create!

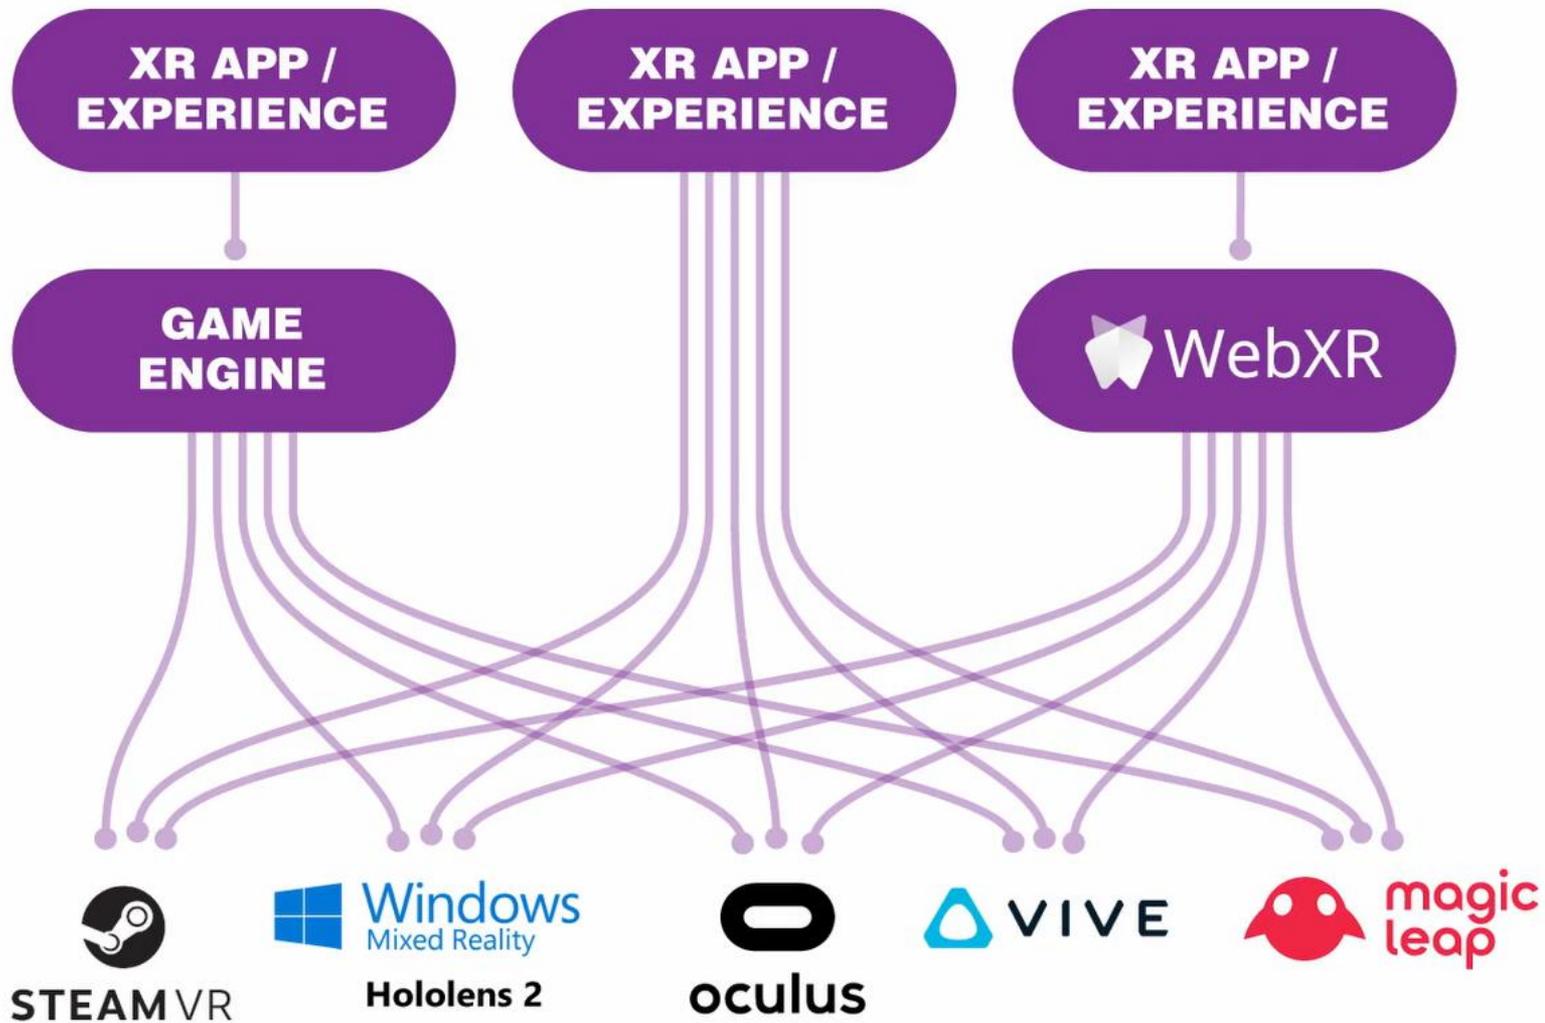

1. **(Project Settings) Click XR Plug-in Management**
2. Click **Install XR Plugin Management**

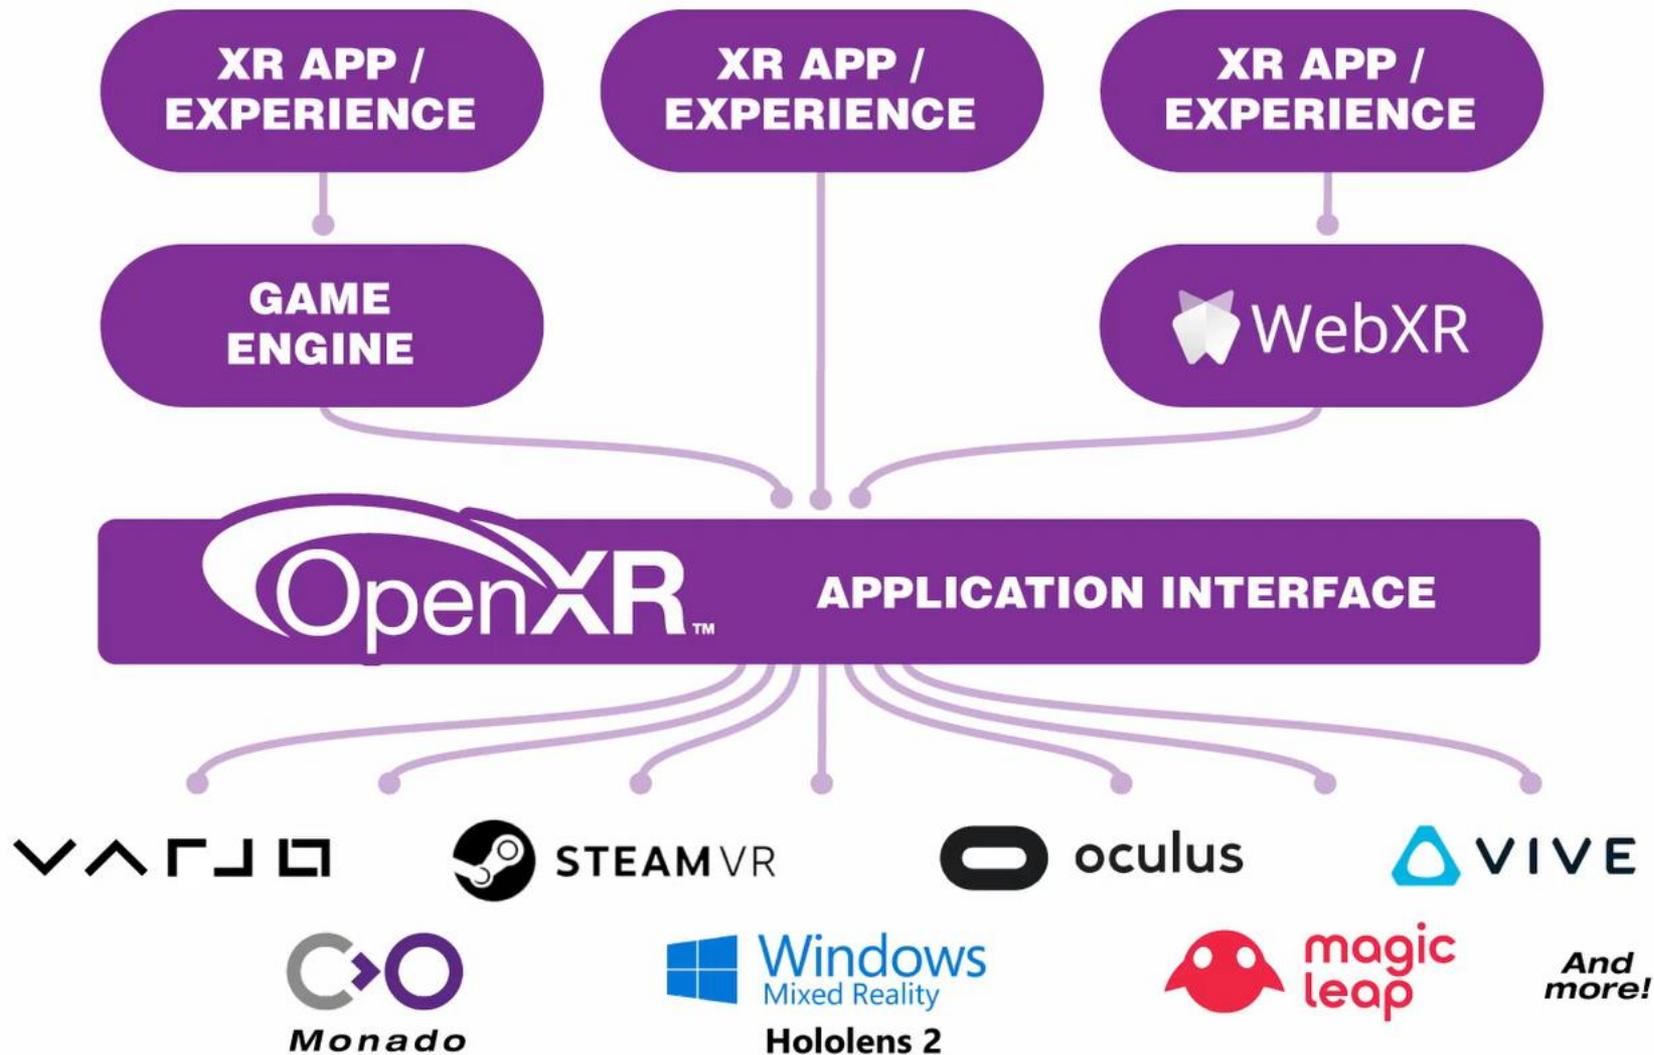

WHAT IS OPENXR?

**Before OpenXR:** Applications and engines needed separate proprietary code for each device on the market.

**OpenXR** provides a single cross-platform, high-performance API between applications and all conformant devices.

# Transforming Cross Platform XR

Transforming Cross Platform XR

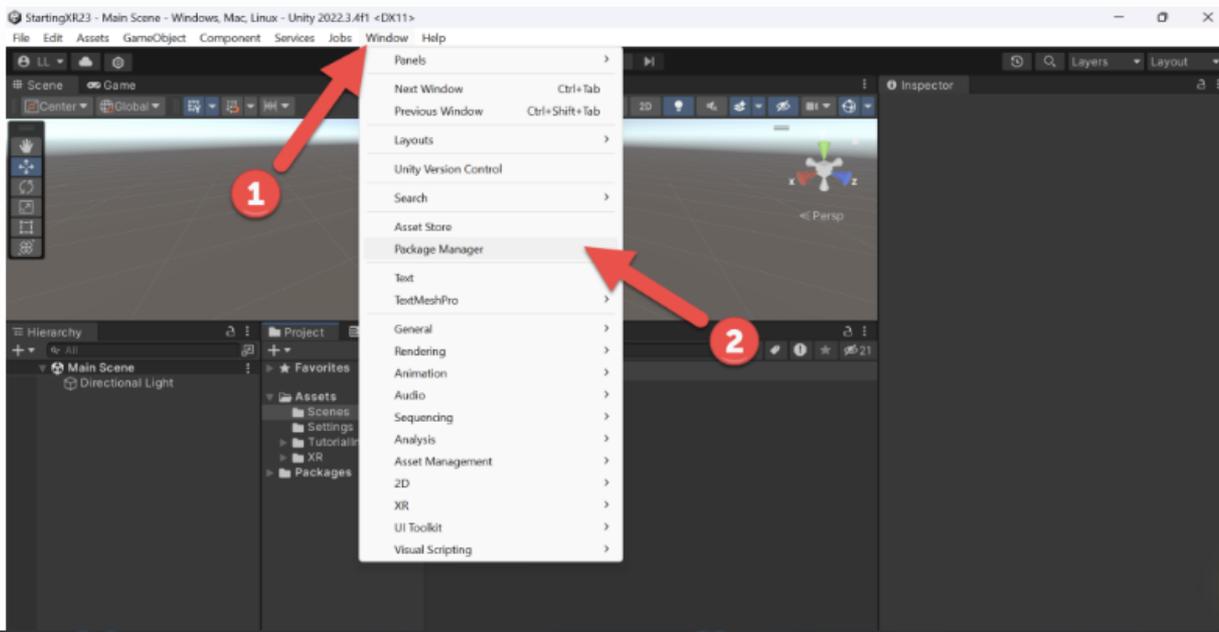

## Add XR Interaction Toolkit (XRI)

- Building on top of the OpenXR standard, the XR Interaction Toolkit (XRI) is a high-level, component-based interaction system for **creating XR experiences**. It provides a common framework for interactions and streamlines cross-platform creation.
- This tool has only very very recently become mature enough to be usable and thus why we're fully embracing it to build the best XR experiences in Unity!

1. **(Toolbar)** Click **Window**
2. Click **Package Manager**

## Build and Run on Quest

- Ok, can't wait anymore – we need to see our game on our Meta Quest!

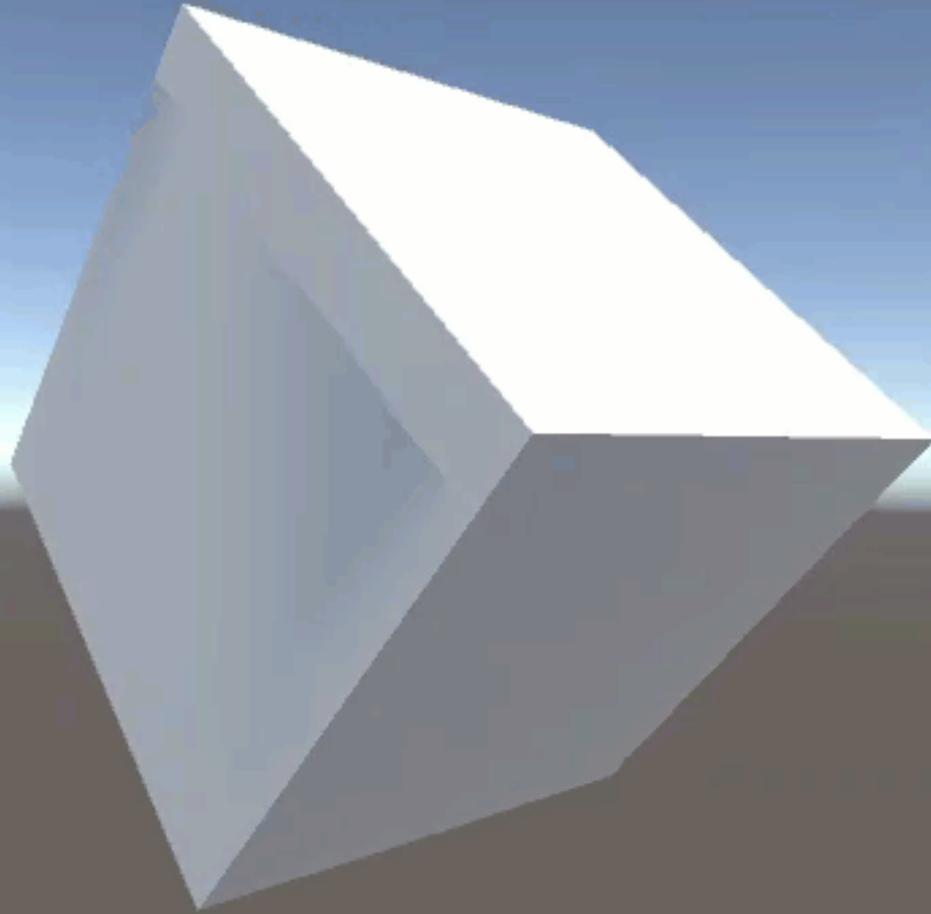

1. **(Toolbar)** Click **File**
2. Click **Build Settings...**

1. **(Build Settings)** Click the arrow dropdown next to **Run Device**
2. If your Quest is connected to your computer, and you've given it permissions – you should see your device
